### DEAR FERTILIZER PROFESSIONAL

Since 2001, through biennial events, IFA and IFDC have been conducting the Phosphate Fertilizer Production Technology workshops to share knowledge and exchange information with representatives of the phosphate fertilizer industry regarding the different production technologies. These workshops have been successful due to their unique scope. Unlike other similar training programs in the industry, IFA-IFDC workshops are not process/product specific but combine all phosphate-based fertilizer processes. The 2017 international workshop will take place in Marrakech, Morocco, during the week of October 2-6, 2017, attracting phosphate fertilizer production engineers and other specialists around the world.

### WHO SHOULD ATTEND?

This IFA/IFDC workshop is designed for engineers in the industry. Previous workshops have also attracted other specialists in the fertilizer industry such as executives, senior managers and those involved in areas of environment and research, all of whom have found the program useful. Entrepreneurs have also benefited from the program.

### WHY PARTICIPATE?

- Examine the status of the most recent phosphate fertilizer production technologies and identify future trends and needs.
- Improve your technical knowledge across a broad range of phosphate production techniques, including understanding the best available technology options, economic factors impacting the sector, energy use scenarios and the best approaches to safety and environmental management.
- Enhance your analytical and troubleshooting skills in order to better identify and resolve operational inefficiencies of your facilities.
- Provide an opportunity to exchange ideas on a range of production topics with leading technology experts and other workshop participants.

## WHY IN MOROCCO?

According to the FAO, Morocco may possess over half of the world's reserves of phosphate. The workshop will offer an opportunity to visit one of the leading exporters of phosphate rock, phosphoric acid and phosphate fertilizers in the world.

## FEED-BACK FROM PAST PARTICIPANTS

*"Today, I still use the IFDC material as a solid reference. In addition, the workshop was a very pleasant experience. I enjoyed good company with engineers from the all over the world, and I got a very useful network of highly skilled experts from the phosphate industry."*

**- Engineer, Denmark**

*"The 2009 phosphate workshop in Morocco was really successful. The hotel, speakers, mine/plant visit, knowledge and research papers; you did excellent work!!! For everybody who attended, thanks for your time and friendship, and I hope you are fine back home."* – **Industrial Projects Director, Colombia**

*"Not knowing very much when I came, I have a much better understanding now. Very knowledgeable speakers! I enjoyed the program very much!"* – **Chief Operating Officer, United States**

*The Phosphate workshop I attended surprised me because of the high quality of the presentations, the diversity of the issues related to the phosphate fertilizers studied and the kindness of the people from IFDC. The workshop also allowed me to know many phosphate fertilizer specialists from many companies and institutions with whom I could establish some work collaboration. I even made some friends I still keep in contact with."* – **Process Engineer, Spain.**

*"I am very glad I could take part in the IFDC workshop – it is very needed to refresh knowledge and discuss with partners from other countries about the same producers' problems."* – **Director, Poland,**
